Introducing the WEFlat 1200 for Layflat hose coupling

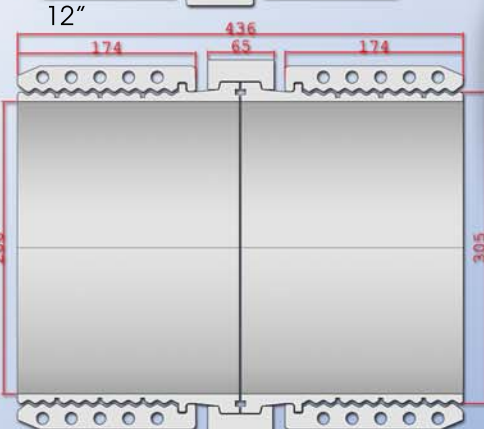

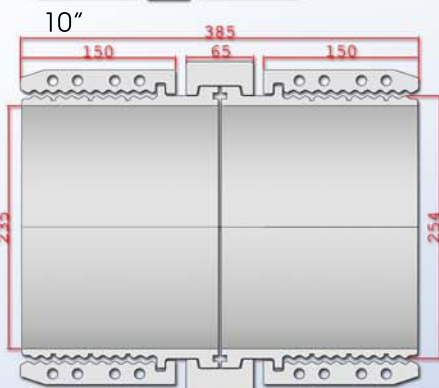

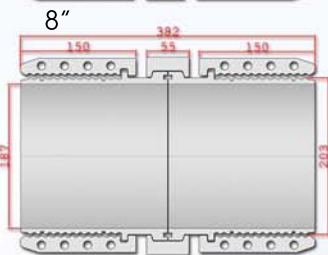

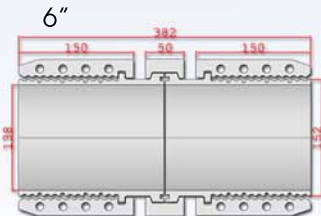

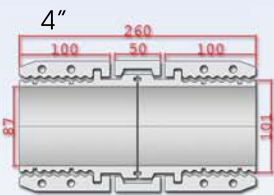

Available in hard anodized aluminium and stainless steel, the WEFlat 1200 is designed to provide a heavy duty rapid deployment coupling system for layflat hose with little reduction in bore size.

Layflat hose is used all around the world in applications such as fire fighting, where a rapid deployment and compact storage of the hose is necessary. W.E. Couplings Ltd design, manufacture and test the WEFlat range in our factory in NW England, and can customize the components to match exactly the required application, whether that is simply joining two lengths of layflat hose, or using our range of adaptor components to connect to for instance a STORZ or Victaulic.

Taiwanese Fire Fighters

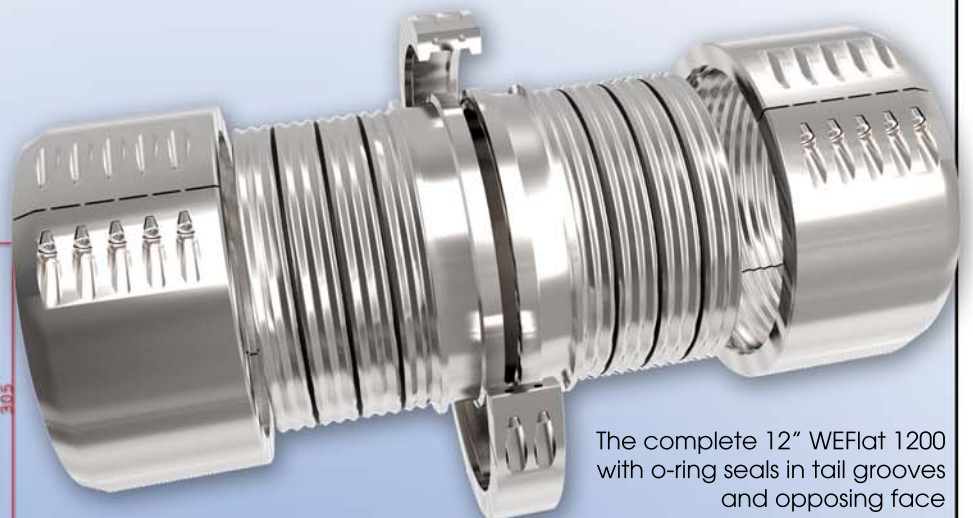

W.E. Couplings follow rigorous quality & testing procedures to ensure the reliability and longevity of the fittings, and work closely with the customer to tailor the product to their needs. This involves the application of various clamping methods such as single or multi bolt, or for a very fast assembly time the 'quick clamp', which utilizes a detachable handle bar that clamps the joint shut in one simple motion. Please also refer to the WeFlat 21 Spec Sheet.
